

Access and explore the
Europresse database.

Summery

1. Access Europresse via the university library's website
2. Discover Europresse

1. Access Europresse via the university library's website.

Please visit the university library's website at the following address:
<https://bibliotheque.cyu.fr>

Below the search bar, click on the 'Databases' tab. This tab takes you to a page listing all the databases to which the university library subscribes. You can search by subject area or perform a manual search. The databases are also listed in alphabetical order: simply click on the relevant letter and scroll down the page to find the database you are looking for.

For Europresse, click on 'E' and scroll down to the terms "Europresse".

The small orange padlock next to the database indicates to users that access is restricted. Only students and staff of CY Cergy Paris Université may access it. If you do not access it via the library's website, you will not be able to access Europresse. CY Université has a partnership agreement to provide access to this database.

You can also type 'Europresse' directly into the search bar.

2. Discover Europresse.

When you click on 'Europresse', you will be taken to the database's home page. You will see the search bar in the centre. Just below it, you will find several filters.

You can choose any time period you like.

For example, select 'since yesterday', then enter the following keywords in the search bar: 'International relations'.

You will be taken to a new page displaying numerous results. You will find filters built directly into the page.

By filtering for 'press' and the period 'yesterday' only, you will get 4 results related to 'international relations'

Return to the home page using the 'Search' button.

You can also use the advanced search options to refine your query. You may find the search tips helpful if you're unsure about your search.

To find out more, click on the 'Folders' button.

The 'Thematic Folder Sharing' feature allows you to search for local or more general information. This feature is designed to facilitate collaboration and the sharing of information.

As you are logged in via the library website, the university is selected automatically. The expert account has not yet uploaded any thematic files, which is why the search does not return any results. However, you will notice that it is also possible to search by date here.

To find out more, click on the 'PDF publications' button.

A wide selection of press articles is available in PDF format.

You can find previous issues as well as any other archives of the newspaper that interest you.

Here too, you can select a specific period to view the newspapers.

Thank you for following this tutorial!
